

# How Cutimed® Sorbact® works

Cutimed® Sorbact® is placed directly on the moist wound bed, achieving contact between the dressing and the wound bacteria.

The bacteria from the wound follow the natural law of hydrophobic interaction and become bound to Cutimed® Sorbact®.

By changing the dressing, bound bacteria are removed from the wound. Over the course of treatment, Cutimed® Sorbact® reduces the amount of microbes, creating conditions to start the natural healing process.
